

Dropbox Instructions

To make accessing your homework materials easy and secure, we'll be using Dropbox, a free, cloud-based file sharing service. It creates a special folder on your computer that automatically syncs its contents with a shared folder on my computer, ensuring you always have the latest assignments.

I recommend installing the Dropbox application on your computer or device, though you can also use it entirely through a web browser if you prefer.

COMPUTER SET-UP:

- **Create an Account:** Go to [<www.Dropbox.com>](http://www.Dropbox.com) and complete the sign-up process. Unless you specify otherwise, I'll assume you're using the same email address you initially used to contact me.
- **Download and Install:** Download and install Dropbox on your computer.
- **Accept Invitation:** You will receive an email from me with an invitation to a folder I created just for you.
- **Locate the Folder:** Locate the folder named [**<Dropbox/\(Your Name\)>**](#) on your computer, where your homework materials are located. This is where your homework materials will appear. You can keep the existing name or rename it as you wish; this won't affect anything on my end.
- **Create a New Folder:** Create a separate folder on your hard drive to store all your guitar lesson materials.
- **Move the Files:** Transfer your homework from the shared folder to your personal folder on your hard drive.
- **Delete:** Once you've moved the files, it's crucial to remove all contents from the shared folder and ensure it is completely empty. This helps manage shared storage space for all students.

Please remember to delete the original files after you copy and move them. Make sure the share folder is empty at all times.

TABLET & PHONE SET UP:

- **Download and Create Account:** Download Dropbox on your device from the appropriate app store. Open the app and complete the sign up process using your email address. Unless you specify otherwise, I'll assume you're using the same email address you initially used to **contact** me.
- **Accept Invitation:** I'll create a folder with your name and send you an invitation via email.
- **Locate the Folder:** Open the app, Find the shared folder with your name. It should contain your homework materials.
- **Save or Move the Files:** I recommend saving the files directly to your device for easy offline access. Alternatively, if you plan to use Dropbox for organizing your materials, you can use the 'move' option in the app to transfer them to a new folder you create within Dropbox.
- **Check Shared Folder:** Moving the contents of a folder typically removes them from the original location. However, issues may sometimes arise. After the move, check the original folder. If any files remain, delete them.

Why Delete the Originals?

Both of us (me and you) share your folder, so the contents left count against my storage as well. I have around 30 student folders, so a **small amount of files on your side can be a big problem for me.**

Also, I can technically delete the files from my side, but I have no way of knowing if the student has copied them already. So once again, **please delete your files! It is your responsibility.**

Thanks!
