

Dropbox Instructions

To make accessing your homework materials easy and secure, we'll be using Dropbox, a free, cloud-based file sharing service. It creates a special folder on your computer that automatically syncs its contents with a shared folder on my computer, ensuring you always have the latest assignments.

I recommend installing the Dropbox application on your computer or device, though you can also use it entirely through a web browser if you prefer.

Copy your files!

Anything left in the shared folder will automatically be deleted **14 days** after it's added.

COMPUTER SET-UP:

- **SIGN-UP:** Go to `<www.Dropbox.com>` and complete the sign-up process. Unless you specify otherwise, I'll assume you're using the same email address you initially used to contact me.
- **INSTALL:** Download and install Dropbox on your computer.
- **ACCEPT:** You will receive an email from me with an invitation to a folder I created just for you. **ACCEPT** the invite.
- **LOCATE:** Locate the folder named `<Dropbox/(Your Name)>` on your computer, where your homework materials are located. This is where your homework materials will appear. You can keep the existing name or rename it as you wish; this won't affect anything on my end.
- **CREATE:** Create a separate folder on your hard drive to store all your materials. (something like GUITAR LESSONS)
- **COPY:** Copy your homework from the shared folder to your personal folder on your hard drive.

TABLET & PHONE SET UP:

- **SIGN-UP:** Download Dropbox on your device from the appropriate app store. Open the app and complete the sign up process using your email address. Unless you specify otherwise, I'll assume you're using the same email address you initially used to **contact** me.
- **ACCEPT:** I'll create a folder with your name and send you an invitation via email.
- **LOCATE:** Open the app, Find the shared folder with your name. It should contain your homework materials.
- **COPY:** I recommend saving the files directly to your device for easy offline access. Alternatively, if you plan to use Dropbox for organizing your materials, you can use the 'move' option in the app to transfer them to a new folder you create within Dropbox.
